

ZygoLOGY ProGrip Rivet Nuts

Issue #1-2017

0264 - Stainless Steel large flange Hex Closed End Range

The most cost effective method of installing a full depth thread in thin gauge materials, ProGrip Rivet Nuts come in a variety of forms. Ideal for use in drilled or punched holes, ProGrip Rivet Nuts are installed from one side making them especially suitable for tube, box sections or tight corners. A comprehensive range of inserts is available in a large range of metric thread sizes to suit most applications.

The large flange head gives an increased bearing area on the panel increasing push out resistance. To increase torque to turn values, hex profile inserts may be used in conjunction with matching pre-punched holes. Closed end inserts can be used to ensure that incorrect bolts cannot damage internal components, and improve resistance to ingress from fluids.

0264 Series Stainless Steel Large Flange Hex Closed End Range

Thread Size	Part Number	Grip Range	Hole Size A/F -0.0 +0.1	D	L	H	P
M4 X 0.7	0264-0425	0.5-2.5	6.1	5.95	16.0	9.0	1.0
